Substance restrictions in VACOM products

Status: March 2024

VACOM complies with the substance regulations applicable in the European Economic Area and Switzerland, as far as applicable:

VACOM products do not contain any substance prohibitions applicable to the respective intended use of the product (in particular REACH[1] Annex XIV and XVII, ChemVerbotsV[2]).

VACOM products do not contain any SVHC substances (Substances of Very High Concern of Annex XIV REACH and Candidate List). The assessment refers to the declaration obligation from the limit value of 0.1% w/w in the product in the sense of the relevant judgment of the European Court of Justice.

VACOM products generally comply with the substance prohibitions of the RoHS Directive[3] and the ElektroStoffV[4].

Changes, in particular extensions of the above-mentioned regulations, will be observed if applicable for the products to be supplied (update of REACH regulation and candidate list). For substances used in products that are included in Annex XIV REACH, VACOM will inform you as soon as the so-called application deadline date is published by the European Chemicals Agency (ECHA) (REACH update tracking).

VACOM considers changes and extensions of substance prohibitions and declaration obligations continuously and informs the customer in time.

Substance restrictions in connection with services provided by VACOM

In connection with the provision of services at VACOM Vakuumkomponenten und Messtechnik GmbH (parts cleaning, assembly, qualitative and quantitative testing), there is no change in the REACH and RoHS properties of the products.
